Educational Tour to Rawatbhata Atomic Power Plant

9th December, 2022

In lieu of an industrial tour, 51 PG students from JDB Govt Girls' College, Kota, along with faculty members and two non-teaching staff members, arrived in Rawatbhata at 10:30 am on December 9th, 2022. This visit was planned with the HR division of RAPP's previous approval. The visit was coordinated by Dr. Pratima Shrivastava. All visitors passed through a security check at the entrance before being driven in the bus of their power plant to the nuclear training centre. ER Dinesh Sharma used a power point presentation to describe how the power plant operated. He also briefed about the history of RAPP. It was an interactive session, and students and faculty asked many questions, including why Rawatbhata was selected as the location for the nuclear power plant, what benefits the nearby population will receive, how a person from the UG level can join the RAPP, and many others. The speaker emphasised for the biology students the useful applications of radiation technology in crop improvement. Following that, the students were brought to the nuclear training centre, where models of Calendria fuel bundles, nuclear reactors etc. were on display. ER S.P. Joshi provided a very lucid explanation using these models. After lunch, the next visit began with a briefing on security rules, during which all guests received helmets and were informed of the significance of adhering to safety regulations at all times. In groups of 15, students were transported to the RAPP units 3 and 4 control room. They were shown various types of control panels and the inquisitiveness of students were satisfied by the panelists at each section. The students were then given the chance of a lifetime to see an operating plant when they were brought to the turbine building. The students observed different nuclear power plant operations, which provided an overview of how electrical energy is produced. They also learned about the various parts used in the machinery. Coolant Channel Replacement Group (CCRG) gave one more presentation, where station head Mr. D. S. Rao briefed the teachers and students. Viewing the clean, green, pollution-free power plant, and expansive Chambal River was the finest part of this location.

Education tour to Rawatbhata Atomic Power Plant
