

# **B B D GOVERNMENT COLLEGE CHIMANPURA JAIPUR**

## **DISTINCTIVE FEATURES 2021-22**

We have been committed to the protection of biodiversity for a long time. In order to continue our endeavor to improve our environment and conserve our ecosystem numerous steps have been taken, creating a healthy and pollution free environment in the campus.

The continuous program of providing food (dana) to the peacocks resulted in an enchanting flock of peacocks in the campus. Peacocks strolling with their glorious feathers, taking royal strides like a prince boasting his shining armor or basking under the settling rays of the Sun is a sight which is often seen in the premise, mesmerizing one and all.

In continuation with our efforts to enrich the biodiversity a large pond of 11 feet diameter ' Tarun Sarovar ' was dug with the help of NSS volunteers to provide for water. Numerous earthen bird feeders are also placed at adequate places so that birds survive during the intense summer heat.

Efforts were made to educate students towards keeping their environment clean by initiating a cleanliness drive from college premises, to their homes and community as a whole.

Webinars on health and hygiene and motivating to stay tough during the pandemic. An awareness campaign about Covid-19 spread in the community and also organized vaccination camp for pupils who had turned 18 in the campus marked as the most distinctive feature during the session 21-22.

The movement to improve the green cover in the campus and continuously working towards keeping the plants and trees alive during the intense hot summer with very scarce water was difficult but could be achieved to some extent.
