Sub.: Regarding establishment of OTP (One Time Password) Based Authentication Hotspot Solution (Wi-Fi)

WiFi is a priceless asset for students, as it offers multiple advantages that can help them succeed in their academic goals. The benefits of WiFi for students are Improved Access to Learning Resources, Online Education, Career Planning, Self-Study, Earning Money, Time Saving etc.

The integration of OTP (One Time Password) Based Authentication for WiFi access offers numerous benefits, including enhanced security, ease of use, and scalability. By leveraging SMS technology, we can strengthen our network defences against unauthorized access and potential cyber threats. SMS-based authentication provides an additional layer of security by requiring users to verify their identity via a unique code sent to their mobile devices, thereby reducing the risk of unauthorized access to our network resources.

Furthermore, the implementation of SMS-based WiFi machine installation is user-friendly and convenient for our college community. With the widespread use of mobile devices, most individuals already have the necessary hardware to receive SMS authentication codes, eliminating the need for additional hardware or complex setup procedures. This simplicity promotes widespread adoption and ensures that all members of our college community can easily access the WiFi network securely.

In view of the above, please make the necessary arrangements for the establishment of an OTP (One Time Password) Based Authentication Hotspot Solution (Wi-Fi) installation within your college premises.
