

- Some of the best practices followed at government college merta city
- addressing environmental issue in and around college
- 1. Greening of campus
- college administration has taken up plantation as in foremost step to address the environment protection as greening of campus by planting trees plants and saplings which enriches the soil and can be instrumental in improving the environmental conditions in and around college campus.
- plantation have been taken up on a large scale for almost past 18 months college campus looks altogether different we have planted more than 2000 plant sapling in the campus and the success rate of survival of these plants because of proper protection timely watering and the soil care has resulted into 99% of survival the college campus looks altogether different after this plantation drive has been taken up
- Another important best practice followed
- Government college merta city being the foremost college and has responsibility to set up a social example which has been aptly done by developing a rainwater harvesting system in college, rainwater harvesting system has been working to the fullest which has been developed by the college by collecting water from the rooftops and this water has been stored in 5 big tanks with the proper filtration process.
- The stored water is being used for watering plants in laboratory and in the for other purposes s
