WHAT IS HETEROLYTIC FISSION OR HETEROLYSIS ?

- The term 'heterolysis' is Greek in origin and approximately translates to unequal breaking. Another name for it is heterolysis cleavage.
- The typical bond fission in which a covalent bond between two chemical species is broken in an equal manner resulting in the bond pair of the electrons being retained by one of the chemical species, while the other species does not retain any of the electrons from the bond pair.

$$A-B \rightarrow A^{\ominus} + B^{\oplus}$$

$$\overset{\ominus}{A}-B \rightarrow A^{\ominus} + B^{\oplus}$$
