Incubation Cell Report

For promoting and generating an entrepreneurial mental makeup in students, the college has an Incubation Cell for entrepreneurship development skills, which encourages fostering a professional tie between the college and industry.

Incubation Cell in the college was opened in the 2021-22 session via the Government of Rajasthan budget for the same under the aegis of the Department of Information and Technology (DoIT) of Government of Rajasthan in joint collaboration with DoIT and the Directorate of College Education of Rajasthan. The Incubation Cell of the college receives rigorous intellectual, technological and professional training for developing entrepreneurship in college students from the online and offline dedicated training programmes, workshops and business and startup meets organized by the Department of Information and Technology (DoIT) of Government of Rajasthan. College mentor professors of the Incubation Cell encourage and motivate students for thinking out of the box and coming up with novel ideas of new startups. Students hypothesize and formulate startup ideas and contact the mentor professors who in turn register those students on the DoIT portal. Students work out their ideas in association with mentor professors and the DoIT personnel. Potentially successful and relevant ideas from the point of view of social utility, employment and capital generation find business investors and professionals for the practical implementation of those ideas.
