

Ques 1 - write down the classification of Textile fiber

Ans.

Que. 2 Difference between Dyeing and Printing

Ans.

Dyeing

Printing

- |                                      |                                     |
|--------------------------------------|-------------------------------------|
| ① it can be done on whole fabric     | ① Done only in localised areas      |
| ② Two side of <del>side</del> fabric | ② One side of fabric                |
| ③ Binders is required for process    | ③ thickness is required for process |
| ④ Done on high temperature           | ④ Done on low temperature           |

Ques What is HTHP? Which fibre is made by this process

Ans. HTHP means high temperature and high pressure. Polyester and nylon is made by this method. HTHP means  $150^{\circ}\text{C}$  temperature. Disperse dye gives good result in HTHP condition. Binder is required for this process.
